

MySuccess Website Developer Course

Introduction

Become a backend web engineer and get your hands dirty with SQL & PHP - the core technologies of the dynamic web. PHP is used by 79% of websites today and is used by giants such as Facebook, Slack and Wordpress. From small eCommerce websites to comprehensive ERP systems, PHP is at the core of an open-source stack that powers modern enterprise. Paired with MySQL or MariaDB, the Apache web server and Linux (or Windows!), developers have a 100% open-source stack with which to develop applications from scratch. PHP is used by a large number of frameworks including Wordpress and Laravel, meaning PHP knowledge lets you develop, optimise and customise these popular platforms.

This programme prepares you for, and includes, the Zend Certified Engineer exam, where you will join a select few of individuals who not only have the practical industry skills, but also the certification to prove it.

MySuccess Website Developer Course

Course Content

Database Development

Data Definition Language
Queries - Retrieving Data
